

Amendments to the Specification:

Preceding paragraph 1 of the specification and immediately following the heading entitled "Background of the Invention," please insert the following new paragraph:

Field of the Invention: The disclosure relates to a builder tool method and apparatus for a multiple virtual machine environment.

Please delete the one paragraph Abstract appearing on page 28 of the specification, and replace it with the following new Abstract paragraph:

A method and apparatus including an overview component depicting a plurality of virtual machines on a display of a computerized system. Parameter details of at least one virtual machine are concurrently displayed with the overview component. The method steps include receiving the compiled source code for two applications, creating two relocatable virtual machines to run the compiled source codes, determining the parameters for the multiple virtual machine environment, locating the two relocatable virtual machines and generating a target executable file for the environment.
